01 · COMPANY OVERVIEW

A Turnkey Partner for Advanced Clinical Services

Integrakare is a specialized healthcare solutions company focused on helping hospitals, medical centres, and private clinics establish, develop, and manage advanced clinical services in hyperbaric oxygen therapy (HBOT), longevity, and healthy aging.

01

We provide integrated, turnkey solutions that combine specialized medical equipment, clinical expertise, medical management, and structured service development.

02

Our approach enables healthcare providers to introduce new clinical offerings without having to independently coordinate every element of equipment procurement, programme development, staffing, and operational implementation.

03

From establishing an HBOT service to introducing comprehensive longevity and age-management programmes, Integrakare works with healthcare partners to develop services tailored to their facilities, patient populations, and business objectives.

> *We go beyond equipment supply. We help our partners build the clinical and operational framework required to deliver specialized services through a coordinated, professionally managed model.*

I

Equipment

Specialized medical equipment, selected and supplied for your facility.

II

Clinical Expertise

Protocols, pathways and programmes built around your patients.

III

Medical Management

Coordinated oversight and operational support, to an agreed scope.

02 · CORE DIVISION A

Hyperbaric Oxygen Therapy Solutions

Integrakare provides turnkey solutions for healthcare providers seeking to establish or expand hyperbaric oxygen therapy services. OUR OFFERING MAY INCLUDE:

01	Supply of hyperbaric chambers and associated equipment.	02	Equipment selection and technical specifications.
03	Facility planning and installation coordination.	04	Clinical protocol development and treatment pathway design.
05	Medical staffing coordination and clinical oversight.	06	Staff training and operational support.
07	Maintenance coordination and quality assurance.	08	Service launch planning and ongoing medical management.

Our objective is to help healthcare providers integrate HBOT into their existing clinical services through a coordinated model that addresses equipment, clinical processes, and day-to-day operations.

03 · CORE DIVISION B

Longevity, Healthy Aging & Age-Management Solutions

Integrakare supports clinics seeking to introduce structured longevity and healthy-aging programmes designed around individual health assessments, biological-age indicators, preventive health strategies, and personalized care plans.

We help healthcare providers move beyond offering isolated treatments by developing integrated programmes that bring together appropriate assessments, clinical interventions, monitoring, and follow-up. Depending on the facility, clinical scope, and available services, these programmes may incorporate:

01

Comprehensive Health and Aging Assessments

- Medical history and risk-factor assessment.
- Functional health and performance testing.
- Appropriate laboratory investigations.
- Biological-age assessments using validated testing methods where available.
- Selected cognitive, metabolic, and physiological assessments.
- Individualized health and lifestyle reviews.

02

Personalized Longevity Programmes

Based on clinical assessment and patient needs, programmes may incorporate:

- Nutrition and lifestyle interventions.
- Physical activity, strength, and functional-health strategies.
- Sleep and stress-management support.
- Metabolic and cardiovascular risk-factor management.
- Cognitive health and performance support.
- Medical follow-up and progress monitoring.

03

Integrated Treatment Packages

Where clinically appropriate and permitted by local regulations, clinics may integrate selected services into structured packages, potentially including:

- Hyperbaric oxygen therapy.
- Clinically indicated intravenous therapies.
- Physiological and functional assessments.
- Selected aesthetic and regenerative medicine services.
- Personalized wellness and lifestyle programmes.
- Repeat assessments to monitor relevant health indicators.

04

Monitoring and Programme Optimization

Longevity programmes should be more than a collection of treatments. Integrakare supports the development of structured patient journeys that may include baseline assessments, individualized care plans, scheduled follow-ups, and repeat measurements.

This provides clinics with a more coherent service offering while helping patients understand their progress through clinically meaningful measures rather than relying on unsupported claims about reversing aging.

04 · PROGRAMME DEVELOPMENT

Turnkey Longevity Programme Development

Integrakare helps clinics transform individual health and wellness services into organized, commercially structured longevity programmes.

OUR SUPPORT MAY INCLUDE

From a single service to a coherent, commercially structured programme.

01	Programme concept and service design.	*02*	Definition of target patient groups and service tiers.
03	Selection and coordination of appropriate equipment and assessments.	*04*	Development of patient journeys and assessment pathways.
05	Integration of available clinical services into coherent packages.	*06*	Coordination of medical professionals and operational resources.
07	Development of programme pricing and service structures.	*08*	Staff training and operational guidance.
09	Patient education and service-launch support.	*10*	Follow-up workflows and performance monitoring.

> *We work with each partner to create programmes that are medically appropriate, operationally practical, and aligned with the clinic's positioning and business objectives.*

05 · PARTNERSHIP MODEL

Our Integrated Partnership Model

Integrakare offers flexible partnership structures across both HBOT and longevity services.

I

Equipment Supply

For clinics with existing medical and operational capabilities, we can support the supply and implementation of specialized equipment.

II

Medical Management

For healthcare providers seeking additional clinical and operational support, we can provide an agreed scope of medical management, protocol development, staffing coordination, and service oversight.

III

Comprehensive Turnkey Solutions

For partners seeking a more integrated approach, we can combine equipment provision, programme design, implementation coordination, clinical support, and ongoing management.

IV

Revenue-Sharing Partnerships

Where appropriate, we can structure revenue-sharing arrangements that align the contributions and commercial interests of Integrakare and the healthcare provider.

THE CLINIC CONTRIBUTES

Its facility, existing infrastructure, and local operational resources.

INTEGRAKARE CONTRIBUTES

Equipment, programme development, specialist expertise, and agreed medical management services.

Responsibilities, investment commitments, operating costs, and revenue allocation are defined individually for each partnership. This approach gives clinics flexibility in introducing new services while allowing both parties to establish a clear operational and commercial framework.

06 · WHY INTEGRAKARE?

One Partner, Multiple Service Lines

01

One partner across multiple service lines

We support healthcare providers in developing HBOT and longevity services through a coordinated approach to equipment, programme design, and medical management.

02

Beyond equipment supply

We focus on the clinical and operational framework needed to turn equipment and individual treatments into organized medical services.

03

Integrated programme development

We help clinics combine appropriate assessments, interventions, and follow-up into structured patient journeys.

04

Flexible commercial models

Our partnership structures can be adapted to different facilities, operational capabilities, and investment priorities.

05

Ongoing service support

Depending on the agreed scope, our involvement can extend from initial planning through implementation and ongoing operational management.

06

A focus on measurable outcomes

We encourage the use of appropriate clinical indicators, validated assessments, and transparent reporting rather than relying on exaggerated or unsubstantiated health claims.

07 · OUR IMPLEMENTATION APPROACH

PHASE 1 **Assess**	Evaluate the clinic's objectives, target patient population, available infrastructure, clinical capabilities, and regulatory requirements.
PHASE 2 **Design**	Define the proposed services, equipment requirements, programme structure, staffing arrangements, operational responsibilities, and commercial model.
PHASE 3 **Implement**	Coordinate the agreed equipment, facility preparation, clinical protocols, training, patient workflows, and service-readiness activities.
PHASE 4 **Launch and Manage**	Support the introduction of the service, patient pathways, operational processes, and agreed medical management activities.
PHASE 5 **Monitor and Optimize**	Review operational performance and, where applicable, clinical indicators to identify opportunities to improve service quality, patient experience, and commercial sustainability.

08 · OUR COMMITMENT

Our Commitment to Clinical Standards

Integrakare recognizes that advanced healthcare services require appropriate clinical oversight, patient selection, evidence-informed protocols, equipment integrity, and compliance with applicable regulations.

Our approach emphasizes defined responsibilities, appropriately qualified personnel, documented procedures, quality assurance, and responsible communication of treatment benefits.

> *For longevity programmes, interventions and claims should be proportionate to the available clinical evidence. Biological-age measurements and other biomarkers can provide useful information in selected contexts, but they do not independently establish that aging has been reversed or that a person's lifespan has been extended.*

Each programme is designed within the agreed clinical scope and applicable regulatory framework.

09 · OUR VISION

Vision

To become a trusted regional partner in the development and management of specialized healthcare services, supporting clinics in integrating hyperbaric oxygen therapy, longevity medicine, and healthy-aging programmes into professionally delivered clinical care.

10 · OUR MISSION

Mission

To simplify the establishment and operation of advanced clinical services by providing integrated equipment solutions, programme development, clinical expertise, and medical management through flexible, partnership-driven models.

Integrakare

11 · PARTNER WITH INTEGRAKARE

Partner with Integrakare

Whether your organization is seeking to establish an HBOT service, introduce structured longevity programmes, or expand its existing clinical offering, Integrakare provides a coordinated approach to service development and management.

We work with healthcare providers to identify opportunities, define the appropriate service model, coordinate implementation, and build a foundation for sustainable clinical and commercial development.
